JSS PRIVATE SCHOOL

Grades 4 and 5

JSSPS/CTP/PO/GEN/62/19-20
4 September, 2019

Dear Parents,

Greetings.

Plant growth can have a considerable effect on the climate. Through the process of photosynthesis, plants use energy from the sun to draw carbon dioxide from the atmosphere and then use it to create the carbohydrates they need to grow. Since carbon dioxide is one of the most abundant greenhouse gases, the removal of the gas from the atmosphere may temper the warming of our planet as a whole.

JSS Private School has always aspired to give its students a better insight and encourage students to innovate new things. Keeping in mind the importance of educating students on the importance of growing plants the students of the senior sections are happy to share their classroom learning with the students of grades 4 and 5. The students of grades 4 and 5 are invited to participate in the Hydroponics Farming project which will be set up in the school premises.

The learning will also, hopefully, encourage growing of plants at home in less space and with less resources and time. Adapting the hi-tech hydroponics system for the simple small-scale farming method, which easily fits even in a small balcony of any apartment, will encourage sustainability in a simple manner without having to sacrifice much time, effort and money.

Please do encourage your child to participate in this learning. We will be installing the equipment on the school premises and students will be involved in the process of learning. Kindly send AED 5 in an envelope as cost towards the installation and maintenance of the project. Money should be sent in a sealed envelope and addressed to the class teacher by 10th September 2019.
