

Students get insight into Breast Cancer through awareness campaign.

October is Breast Cancer Awareness Month, which is an annual campaign to increase awareness of the disease.

Breast cancer is the second most common kind of cancer in women. A mammogram – the screening test for breast cancer – can help find breast cancer early when it's easier to treat. National Breast Cancer Awareness Month is a chance to raise awareness about the importance of early detection of breast cancer.

The students and teachers at JSS are privileged to have a skilled set of parents who support all our learning endeavours. In our bid to create awareness about breast cancer and reduce the stigma surrounding it, we enlisted the support of Mrs. Sajitha Abdu the mother of Ahmed Rasheed in 8D. On Sunday 8th October 2017 she delivered an informative talk which went a long way in expanding our student's knowledge of this illness.

After the talk the students and staff united together for a human formation of the pink ribbon.
